

A TRUE ENERGY AWARENESS

In closing, a short biography of a researcher is presented who was able to make the transition from closely held, though erroneous, ideas to a True Energy Awareness.

The discover of deuterium, or heavy water, Nobel prize laureate Professor Harold Urey (1893 -1981), was one of the first and staunchest supporters of the use of nuclear power for electrical energy production. He was one of the prominent scientists to witness the hydrogen weapons test conducted at Bikini Atoll.

Professor Urey was dedicated to an effort that would exploit this power for the benefit of man and spearheaded a campaign devoted to the rapid establishment of nuclear power for electrical generation.

As one of the worlds most respected spokesman for the nuclear theme, it is significant to note that by the early 1970's, after a spiritual and intellectual awakening, he was totally convinced of the folly of his previous convictions.

Warning bells rang in professor Urey's psyche as he realized that the nuclear poisons could not and were not to be contained. He predicted that this demon, which he had once embraced, would devastate all human life on the planet without even a single detonation of a nuclear device.

Professor Urey began to sound the alarm bells in the scientific community with a fervor unknown to his previous nuclear promotions.

His message, however, was falling on deaf ears.

Professor Urey explained that environmentally derived energy production in unlimited quantities had been proven a reality, therefore negating any need for atomic power on earth.

He accused the scientific community of being blind to the true and simple facts of energy, stating that nuclear scientists are like children not knowing the true value of currency. Thinking they are richer with many pennies, rather than a single piece of highly numbered paper.

Tesla's Engine is one of these highly denominated but ignored devices professor Urey was making reference to.

Professor Urey was, like Tesla, a scientist of the highest integrity. In both of these men's lives, truth reigned supreme over ego.

Quoting Tesla:

The scientists, from Franklin to Morse were clear thinkers and did not produce erroneous theories. The scientists of today think deeply instead of clearly. One must be sane to think clearly, but one can think deeply and be Quite Insane.

LATE SPIRITUAL LEADER ROM DASS ON NUCLEAR ENERGY

“If You’re Concerned About the Earth;

“Our bad farming techniques use about one inch of top soil every couple of years and it takes one hundred years to produce one inch. That’s an interesting time relationship. Then there’s the time relationship that to raise a person with support from the State, takes child care and lunches and school programs and summer jobs for school students, college education. Wholesale that’s about forty thousand dollars. The Government gets it wholesale, it would appear. Forty thousand dollars is just what it takes of seventeen months of one person in prison. That’s an interesting trade off. You see the predicament is, that raising a person takes about twenty years, and our political time units are two to six years. People are not going to go for programs that they are not going to see the result of. That’s not going to get them elected. So that’s funny isn’t it? And then how about the carcinogens that we’re eating and drinking unknowingly? They have about a twenty five year span, before you will know that that wasn’t the right one to eat or drink, ok.

“What an interesting one; Nuclear waste. Boy did we blow it. You know, we really thought technology had beat the system. We are so arrogant. We thought atomic energy would do it. Cheap energy would really do it. Now we have so much waste material. I mean we’ve got a stuffed intestine the likes of which you wouldn’t believe and we can’t get rid of the stuff, we don’t know what to do with it. Because the problem is, it is lethal for two hundred and fifty thousand years. That’s one hundred times the history of civilization. And we sit around and say; Well I have a theory that if you embed it in salt it will be safe, except the salt turns out to leak. And Admiral Watkins, the head of the atomic energy; He’s told; Look just keep the game going, but go, be truthful. He’s truthful about everything except that he is committed to keeping the game going. That actually the mistake is the game. And I know in my heart that’s true. And yet I am part of a social system in which that is not being acknowledged that that’s true. Now that is an interesting problem for me. And the interesting question is how much you and I live with the dissonance between what our inner hearts know to be true and the external social institutions that we are affiliated with. That’s far out.

“Something happened to me and a few others in the sixties that opened us to a feeling of compassion. The last eight years with president Reagan I did not feel that the image of my country was a compassionate one. And that feeling was painful to me because I was a citizen of this country. And this countries’ stated values were not in harmony with my inner heart and what I knew to be true. So most of us, because we live with this all the time, we become sort of closet compassionates. We sneak a compassionate action, almost as a heretic act. An act of heresy....” ***TeslaEngine.org***
